Research Question

Are there wealth differences between households with and without migration background?

Novelty

Separation of migrant household groups into high-income countries $^1({\rm HIC})$ and non-high income countries (non-HIC)

Wealth:

- ► Higher education and better health care for the next generation
- Cushion in times of economic hardship, e.g. Mathä, Porpiglia, and Sierminska (2011)

Wealth distribution:

- Unequal in modern societies, e.g. Piketty (2014)
- Wealth gaps for otherwise marginalized or disadvantaged groups, e.g. Muckenhuber, Rehm, and Schnetzer (2022)

Theoretical Background

(日) (部) (注) (注)

고 노

Wealth Accumulation Function:

$$W_t = \sum_{\alpha=1}^{n} (1 + r_{\alpha,t}) w_{\alpha,t-1} + Y_t - C_t + T_t.$$

Rudolf Faininger, Jun.-Prof.in Dr. Svenja Flechtner

Wealth Accumulation Function:

$$W_t = \sum_{\alpha=1}^{n} (1 + r_{\alpha,t}) w_{\alpha,t-1} + Y_t - C_t + T_t.$$

- Differences in...
 - Asset types (w) & rates of return (r)
 - Disposable income Y
 - Saving rates (Y-C)
 - Wealth transfers (T)

Recentered Influence Function Decomposition (Firpo, Fortin, and Lemieux 2018)

- Decomposition of the net wealth gap at different percentiles
- Explained and unexplained part
- Explanatory power of each control variable

Categorical control variables:

- Age
- Gender
- Marital Status
- Children

- Education
- Net Income
- Inheritance

Rudolf Faininger, Jun.-Prof.in Dr. Svenja Flechtner

16 / 26

		Natives	Migrants			
			1st Generation		2 nd Generation	
			HIC	non-HIC	HIC	non-HIC
Age: Old	%	54.0	49.6	31.5	10.5	6.9
Gender: Male	%	46.9	48.1	46.9	46.9	35.5
Marital Status: Single	%	49.4	43.3	33.7	50.4	44.0
Children	%	24.5	32.1	48.3	38.3	40.7
Education: High	%	90.4	72.6	60.9	87.0	79.7
Net Income: High	%	50.8	49.5	45.0	48.5	51.4
Inheritance	%	4.9	2.6	1.2	3.7	4.2
N		11,903	837	1,544	775	88

Results

18 / 26

Notes: Own graph. Data Source: SOEPv35 2017. The total gap indicates the total gap in net overall wealth in euros. The explained part refers to the share of this gap that is explained by included observed characteristics.

Figure: Wealth Gaps

Rudolf Faininger, Jun.-Prof.in Dr. Svenja Flechtner

Unexplained Wealth Gap:

- 1st Gen. non-HIC: up to approx. 200.000 Euro (90th)
- 2nd Gen. non-HIC: up to approx. 160.000 Euro (90th)
- 1st Gen. HIC: up to approx. 65.000 Euro (75th)
- 2nd Gen. HIC: up to approx. 25.000 Euro (75th)

Summary, Limitations, and Next Steps

< □ > < □ > < □ > < □ > < □ > < □ >

Summary:

- Wealth gaps for all migrant subgroups
- Unexplained parts remain high, especially for non-HIC households (up to 200.000 Euro)
- Age is statistically most powerful variable (8 to >140%), especially for 2nd Gen.
- Income is statistically relevant variable (4 to 15%), especially for 1st Gen. non-HIC.
- Education level account for partially high shares at 25th percentile (up to 67%)
- Inheritance plays a minor role, but this finding should be considered with caution

◆□ ▶ ◆□ ▶ ◆三 ▶ ◆三 ▶ ◆□ ▶ ◆○ ◆

Limitations:

- Differential saving rates, different portfolio structures, as well as differential patterns of wealth transfer could be important drivers of migrant wealth gaps
- We only account for assets in Germany
- Wealth transfers could be highly underestimated

◆□▶ <□▶ < □▶ < □▶ < □▶ < □▶ < □▶</p>

Outlook:

- High Net Worth Sample (SOEP)
- The role of the length of stay of first-migrant residents
- Emphasis on asset portfolios
